Asynchronous Activity 1: Student Early Warning Tool Using KNIME

This repository contains the required output for Asynchronous Activity 1. The project uses KNIME to predict student risk status from academic performance data.

Files

- DemoEarlyWarningTool.knwf - exported KNIME workflow
- student_performance_knime.csv - dataset used by the workflow

Algorithms

- Decision Tree
- Logistic Regression
- Random Forest

How to Run

- Import the .knwf file into KNIME Analytics Platform.
- Configure the CSV Reader and select the included dataset.
- Execute all nodes.
- Open the Scorer nodes to review the evaluation results.
